COVER: The crustose Yellow Soot Lichen (*Calicium tigillare*) covers this snag and makes a colourful resting place for a stink bug. This lichen is one of the 113 species whose name has changed since Brodo's *Lichens of the Ottawa Region, Second Edition* appeared in 1988. Patches of the foliose Hammered Shield Lichen (*Parmelia sulcata*) and fruticose Bristly Beard Lichen (*Usnea hirta*) also find this spot a good place to grow. See the article in this issue by Brodo *et al.*, pages 1–27. Photo: Colin Freebury, south of Ottawa International Airport, September 2006.
