COVER: Fruiting bodies of Wasp's Nest Slime Mould (*Metatrachia vesparia*), with clusters of shiny blue-black ~1.5 mm tall sporangia on orange stalks. Specimen collected by Eleni Hines, August 2017, Spednic Lake Protected Natural Area, New Brunswick. This species is widespread on rotting wood and bark in forests. The old sporangia resemble miniature paper wasp's nests. See Zoll *et al.* (pages 64–86). Photo (created with focus-stacking): Amanda Bremner and Gayathri Sreedharan.
